# HUDAIFA AHAMED

**Data Engineer | PySpark | SQL | ETL | Big Data**

Kerala, India | +91-9995597294 | hudaifaahmd@gmail.com

Available Immediately | Open to Relocation | Portfolio: hudaifa-ahamed.netlify.app

## PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience building and optimizing ETL pipelines, data migrations, and large-scale batch processing in Cloudera Hadoop environments. Delivered 30+ production ETL workflows and migrated enterprise reporting datasets from Netezza/Cognos to Hadoop using HiveQL, Impala SQL, and Informatica BDM. Built reusable, config-driven PySpark frameworks with automated validation and reconciliation. Strong in SQL performance tuning, root cause analysis, and end-to-end delivery from requirements through UAT and production deployment. Recognized as one of the Best Performers of the Quarter (Q3 2025). Actively expanding cloud data engineering skills on Databricks and AWS.

## CORE TECHNICAL SKILLS

**Programming & Scripting:** Python, SQL, Shell Scripting (Bash)

**Big Data & Processing:** PySpark (DataFrame API, Spark SQL), Cloudera Hadoop, HiveQL, Impala SQL

**ETL & Data Integration:** Informatica BDM, ETL Development, Data Migration, Data Integration, Batch Processing, Config-Driven ETL Frameworks

**SQL & Performance:** Query Optimization, SQL Performance Tuning, Window Functions, CTEs, Complex Joins, Dynamic SQL, Partition-Based Loading

**Data Quality & Reliability:** Data Validation, Data Reconciliation, Root Cause Analysis (RCA), Pipeline Debugging, Production Issue Resolution

**Tools & Methodologies:** Git, Jira, Agile/Scrum, SDLC

**Cloud (Foundational):** Databricks, AWS, Azure, GCP

## PROFESSIONAL EXPERIENCE

**Technical Associate - Data Engineering** Jul 2023 – Aug 2026

**Acabes International Pvt Ltd – Kochi, India** (Global Capability Centre)

- Engineered 30+ production ETL workflows implementing business logic, transformations, and validation rules using Informatica BDM, HiveQL, Impala SQL, PySpark, and shell scripting on Cloudera Hadoop.
- Migrated 15+ enterprise reporting datasets from Netezza/Cognos to Hadoop-based ETL workflows (HiveQL, Informatica BDM), preserving data consistency for downstream reporting.
- Architected a reusable config-driven PySpark ETL framework with dynamic configuration handling, automated validation and reconciliation, flexible batch execution, and Bash job launchers, allowing new pipelines to be onboarded through configuration rather than custom code.
- Diagnosed complex data quality and transformation issues in enterprise reporting pipelines through root cause analysis and deployed validated production fixes.
- Owned multiple ETL and migration projects end to end, covering query conversion, workflow development, validation, UAT support, and production deployment.
- Built daily, monthly, quarterly, and custom-date workflows with configurable runtime parameters and partition-based loading logic.

- Tuned HiveQL and Impala SQL queries for performance, compatibility, and scalability across large batch workloads.
- Delivered business rule enhancements, derived columns, and workflow redesigns across large-scale pipelines while consistently meeting SLA commitments.
- Partnered with business users, development teams, and production support teams on requirements clarification, UAT validation, release cycles, and deployments.

## KEY PROJECTS

**Netezza/Cognos to Hadoop Migration** | *Informatica BDM, HiveQL, Impala SQL*

- Modernized 15+ legacy reporting workflows by translating business rules and Netezza SQL logic into scalable HiveQL and Informatica BDM pipelines for enterprise batch processing.
- Designed validation and reconciliation checks to confirm data consistency between legacy and migrated outputs.

**Config-Driven PySpark ETL Framework** | *Python, PySpark, Spark SQL, Bash*

- Developed PySpark pipelines using the DataFrame API and Spark SQL for enterprise batch processing on Cloudera Hadoop.
- Implemented dynamic configuration handling, validation and reconciliation logic, and Bash scripts to execute PySpark jobs.

**Enterprise ETL Enhancements & RCA** | *PySpark, HiveQL, Informatica BDM, Impala SQL*

- Resolved 15+ complex enterprise ETL enhancement and data issue requests across multiple reporting domains, including IFRS 9 reporting pipelines.
- Investigated data discrepancies by tracing transformation logic across HiveQL, Informatica BDM, and PySpark workflows to isolate root causes.
- Implemented corrected transformation logic and business rule enhancements, including derived columns, and verified outputs through data validation and reconciliation.

**NYC Taxi Lakehouse (Personal Project)** | *Databricks, Delta Lake, PySpark, SQL*

- Built a monthly NYC Taxi Lakehouse pipeline on Databricks using PySpark and SQL, with Bronze, Silver and Gold layers, data validation, quarantine handling and reconciliation (GitHub).
- Scheduled monthly runs with Databricks Jobs and published validated aggregates to Databricks dashboards, also replicated on the portfolio site.

## ACHIEVEMENTS

- Recognized as one of the Best Performers of the Quarter, Q3 2025.
- Earned high performance ratings in consecutive years for delivery quality, ownership, and analytical problem-solving.

## EDUCATION

**Bachelor of Computer Applications (BCA)** | University of Calicut 2023
