HUDAIFA AHAMED

Data Engineer | PySpark | SQL | ETL | Big Data

+91-9995597294 | hudaifaahmd@gmail.com | Available Immediately | Willing to Relocate

Portfolio | Github

PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience in ETL development, data migration, and big data processing within Cloudera Hadoop environments. Skilled in Python, PySpark, HiveQL, SQL transformation engineering, Informatica BDM, and designing large-scale data pipelines. Experienced in modernizing legacy ETL and analytics workflows into scalable Hadoop-based solutions using HiveQL, Impala SQL, and PySpark. Developed reusable config-driven PySpark ETL frameworks for scalable batch processing. Strong analytical problem-solving skills with expertise in root cause analysis (RCA), data validation, workflow optimization, and complex ETL delivery. Committed to continuous learning and adopting modern data engineering technologies and best practices to build scalable and reliable data solutions.

CORE TECHNICAL SKILLS

Data Engineering & Big Data: Python, PySpark, SQL, HiveQL, Impala SQL, Cloudera Hadoop, Informatica BDM, Shell Scripting

ETL & Migration: Informatica ETL Development, PySpark ETL Development, Data Integration, Data Migration, Batch Processing, Config-Driven ETL Frameworks

SQL & Optimization: Query Optimization, Dynamic SQL, Complex Joins, Window Functions, CTEs, SQL Performance Tuning

Data Quality & Reliability: Data Validation, Data Reconciliation, Root Cause Analysis (RCA), Pipeline Debugging, Production Issue Resolution

Development Practices: Git, Jira, Agile/Scrum Methodology, SDLC

PROFESSIONAL EXPERIENCE

Acabes International Pvt. Ltd. – Kochi, India

Technical Associate - Data Engineering
Jul 2023 – Aug 2026

- Developed and optimized 30+ complex ETL workflows implementing business logic, data transformations, and validation rules using Informatica BDM, HiveQL, Impala SQL, PySpark, and shell scripting in Cloudera Hadoop environments.
- Modernized 15+ enterprise reporting datasets from Netezza/Cognos to Hadoop-based ETL workflows using HiveQL and Informatica BDM, ensuring data consistency and reliable downstream reporting.
- Independently delivered multiple end-to-end ETL and migration projects involving query conversion, workflow development, validation, UAT support, and deployment activities.
- Analyzed and resolved complex data quality and transformation issues in enterprise reporting pipelines by identifying root causes in HiveQL/Informatica ETL logic and implementing validated production fixes.
- Implemented complex business rule enhancements, derived columns, workflow redesigns, and reporting improvements across large-scale data pipelines while meeting defined SLA commitments.

- Created and optimized daily, monthly, quarterly, and custom-date ETL workflows with configurable runtime parameters and partition-based loading logic.
- Developed reusable config-driven PySpark ETL frameworks with dynamic configuration handling, validation and reconciliation logic, flexible batch processing capabilities, and Bash scripts for PySpark job execution.
- Optimized HiveQL and Impala SQL queries for compatibility, performance, scalability, and large-scale batch processing requirements.
- Collaborated with business users, development teams, production teams, and stakeholders during requirement clarification, UAT validation, release cycles, and production deployments.

KEY PROJECT HIGHLIGHTS

Enterprise Data Migration & ETL Development

- Modernized 15+ legacy reporting workflows by translating business rules, Netezza SQL queries, and ETL logic from Cognos/Netezza into scalable HiveQL- and Informatica BDM-based data pipelines for enterprise-scale batch processing.
- Designed, developed, and optimized complex business and ETL transformation logic, validation rules, and reconciliation processes for enterprise reporting pipelines using HiveQL and Informatica BDM.

Enterprise ETL Enhancements & RCA

- Resolved 15+ complex enterprise ETL enhancement and data issue requests across multiple reporting domains, including IFRS 9 reporting pipelines, through transformation logic analysis, root cause identification, data validation, and production deployment support.

PySpark ETL Modernization & Framework Development

- Developed PySpark-based ETL pipelines using the DataFrame API and Spark SQL for enterprise batch data processing within Cloudera Hadoop environments.
- Developed reusable config-driven PySpark ETL frameworks and implemented scalable ETL pipelines with dynamic configuration handling, validation and reconciliation logic, flexible batch processing capabilities for enterprise-scale data pipelines, along with Bash scripts for PySpark job execution.

ACHIEVEMENTS

- Recognized as one of the **Best Performers of the Quarter – Q3 2025**.
- Received high performance evaluation ratings for consecutive years for delivery quality, ownership, and analytical problem-solving.

ADDITIONAL TECHNICAL EXPOSURE (Ongoing Learning & Exploration)

Cloud Data Engineering: Databricks, AWS, GCP & Azure — Foundational Learning
AWS Cloud: Amazon EC2, AWS Lambda, Amazon S3 — Ongoing Learning
Hands-on Project: NYC Taxi Lakehouse using Databricks, PySpark and SQL (GitHub) — Personal project.

EDUCATION

Bachelor of Computer Applications (BCA) | 2023
Peekay CICS Arts & Science College, University of Calicut
